

# KiCad StepUp tools cheat sheet

<https://github.com/easyw/kicadStepUpMod>

## 1) What StepUp tools are for?

KiCad StepUp tools are a [FreeCAD Macro](#) and a [FreeCAD WorkBench](#) to help in **Mechanical Collaboration** between KiCad EDA and a Mechanical CAD.

With StepUp it is possible to:

- load kicad board and parts in FreeCAD and export it to STEP (or IGES) for a full ECAD MCAD collaboration
- load *kicad\_mod* footprint in FreeCAD to easy and precisely align the mechanical model to kicad footprint
- convert the STEP 3D model of parts, board, enclosure to VRML with Materials properties for the best use in kicad
- check interference and collisions for enclosure and footprint design
- design a new pcb Edge with FreeCAD Sketcher and PUSH it to an existing kicad\_pcb Board
- PULL a pcb Edge from a kicad\_pcb Board, edit it in FC Sketcher and PUSH it back to kicad
- PUSH & PULL 3D models positions between FreeCAD and KiCAD
- ECAD / MCAD Collaboration and Synchronization
- generate Blender compatible VRML files

## 2) Requirements

KiCad StepUp tools need with the following requirements:

- **KiCad Stable Release**  $\geq 4.0$  or kicad **Nightly Development Builds**
- **FreeCAD** stable release **0.16**  $\geq 6712$  or even better **0.17** or **0.18**
- a library of STEP 3D models now available as default from [KiCad/packages3D](#)

## 3) How to install StepUp tools

KiCad StepUp tools can be installed as a **FreeCAD Macro** but it is strongly suggested to install StepUp as a **FreeCAD WorkBench**.

Since KiCad StepUp tools have been added to [FC WorkBenches](#), so they can be installed through the FreeCAD [addons installer](#) or starting from FC version 0.17, through the **addons manager** in the FC Tools Menu. Then StepUp buttons will be available to be customized in FC Toolbars.

If KiCad StepUp tools are installed as a FC WorkBench, then **it will be possible to Open directly from the FC File Menu a *kicad\_pcb* board file or a *kicad\_mod* footprint file** and many useful features will be also available.

## 4) Configure StepUp tools

To use StepUp tools for converting a *kicad\_pcb* Board to a mechanical STEP model you just need to **configure** your 3D prefix path(s) like your **KISYS3DMOD** value into the FreeCAD StepUp preferences page, located in the preferences system of FreeCAD (Edit menu -> Preferences).

Just click the green icon:

## 5) Tips

Tips to use StepUp tools at its best

- never use a scale different from 1:1:1 in your 3D models
  - configure your [prefix3D] in the FreeCAD StepUp preference page to your KISYS3DMOD path
  - use STEP or IGES or VRML or mixed type of models in your board
  - use bounding boxes to reduce your STEP board file size if required
  - each 3D model is suggested to be a single object (union of parts or compound in FC)
- note:** compound may be slower than union, because it needs to re-create a compound after loading the model

## 6) Useful Video Tutorials

Here some links of StepUp tutorial:

- StepUp: [Align Parts to Kicad footprint](#)
- StepUp: [converting a KiCad board and Parts to STEP](#)
- StepUp: [PUSH & PULL a PCB Edge using FC Sketcher](#)
- StepUp: [PUSH&PULL 3D models between KiCAD & FreeCAD \(ECAD MCAD Synchronization\)](#)

There is also a video tutorial made by a user:

- StepUp: [Installing, Import 3D model, Exporting the Board](#)

Note: in the video the user is copying all demo files, when in fact it is better to install StepUp as a FreeCAD WorkBench.

## 7) Need Help?

KiCad info forum is a great resource:

<https://forum.kicad.info/search?q=step>

# KiCad StepUp tools cheat sheet

<https://github.com/easyw/kicadStepUpMod>

## The Gui

A brief recap on KiCad StepUp tools buttons.

**Note: each button has a Tooltip**

### Load 'kicad\_pcb' Board

Load a 'kicad\_pcb' file into FreeCAD

### Import 3D model to be Aligned

Import a 3D STEP model into FreeCAD

### Load 'kicad\_mod' Footprint

Load a 'kicad\_mod' footprint into FreeCAD

### Export 3D model Aligned

Export a 3D STEP & VRML model back to KiCad

### Export selected to STEP

Export selected objects or Board and Parts to hierarchical STEP file

### Push & Pull PCB Edge

Read and Write pcb Edge from KiCad into FC Sketcher

### Add Reference Axis

Add reference Axis to the FreeCAD design

### Check Interferences and Collisions

Check Interference and Collisions in Board Design

### Help

Mini Help inside StepUp tools

### Preferences Config Page

showing the preferences Page

### Make a Union

Make a Union of Parts

### Make a Compound

Make a Compound of Parts

## Option checkboxes

### Materials properties

Adding Material to VRML when Exporting a 3D model

### Virtual mechanical

Adding Virtual kicad Parts when Loading a 3D model of the PCB

### export Board to STEP

Automatically export Board & Parts to STEP after Loading a 3D model of the PCB if checked

## Useful Video Tutorials

Here some links of StepUp tutorial:

- StepUp: [Align Parts to Kicad footprint](#)
- StepUp: [converting a KiCad board and Parts to STEP](#)
- StepUp: [PUSH & PULL a PCB Edge using FC Sketcher](#)
- StepUp: [ECAD MCAD Synchronization & Collaboration](#)

There is also a video tutorial made by a user:

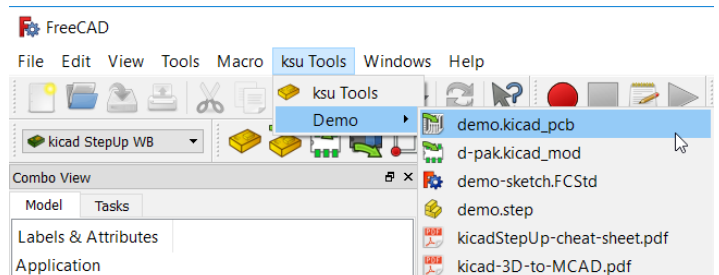

- StepUp: [Installing, Import 3D model, Exporting the Board](#)

Note: in the video the user is copying all demo files, when in fact it is only needed *kicad-StepUp-tools.FCMacro* file.

## The WorkBench

A screenshot on KiCad StepUp WB.

## Useful Designing external workbenches

Two external workbenches:

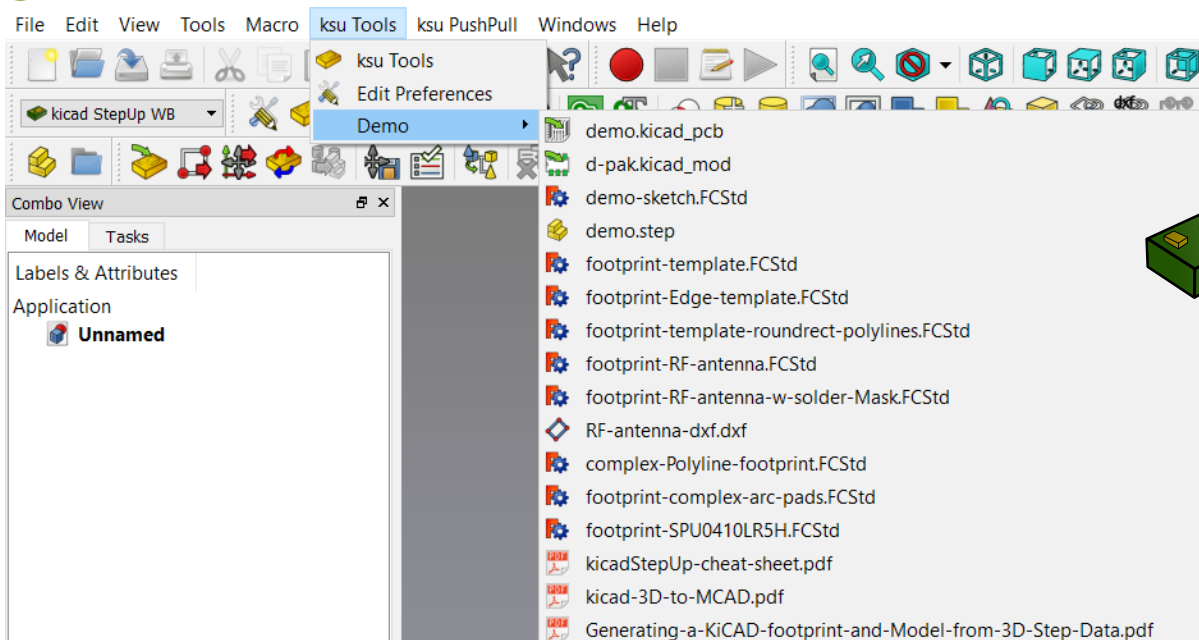

- **Manipulator workbench** useful to align and move assemblies and STEP models  
Aligner Mover and Caliper are companions in 3D modelling

**Defeaturer workbench** useful for editing STEP models, removing some features from the model; defeaturing and repairing tools.

FreeCAD 0.18

## StepUp WorkFlow for 3D models

How to create a 3D model library for KiCad with StepUp tools

Use StepUp tools to Load the Footprint in FC and Align it

Use FreeCAD or any MCAD sw as 3D designer for a 3D model, or just download a 3D STEP model from on-line libraries

Place the exported models to the KISYS3DMOD folder

## Use Manipulator WB

to align the STEP model to footprint  
[Manipulator workbench](#)

### Note:

when aligning a 3D model to a kicad footprint, StepUp takes care of:

- 2D footprint rotation of kicad for the footprint alignment
- vrml model z rotation

It is mandatory that the footprint has:

- x and y of the 3D model rotation set to 0
- x, y and z of the 3D model translation set to 0

The user has to check/modify, if needed, the part of 3D vrml/step model in kicad as following

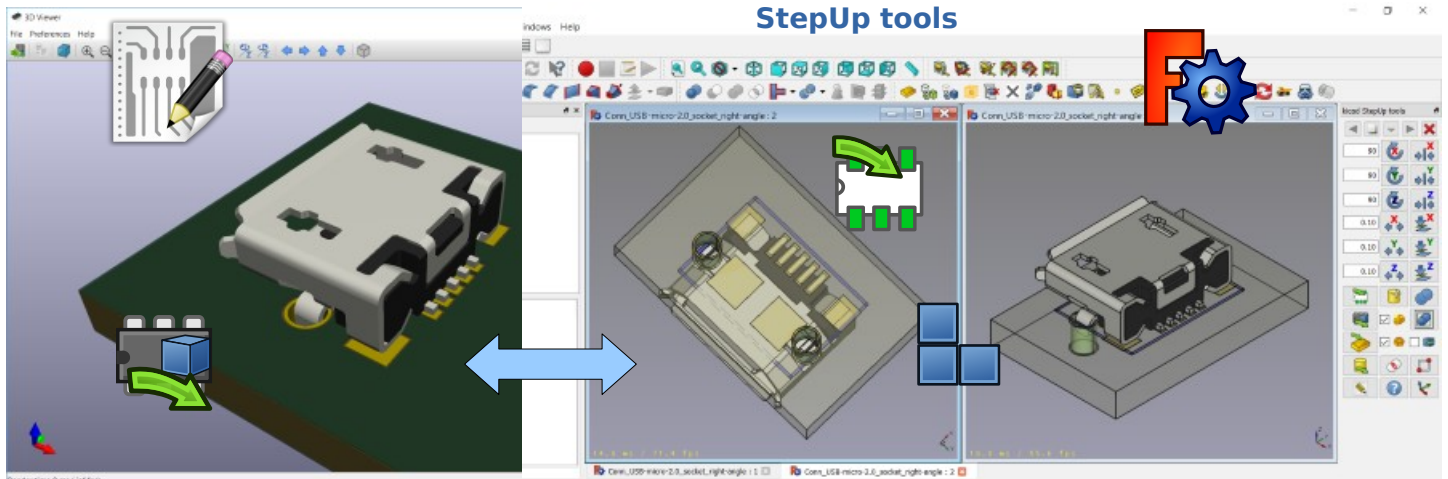

```
(model path/name.wrl
(at (xyz 0 0 0))
(scale (xyz 1 1 1))
(rotate (xyz 0 0 0))
```

at (xyz 0 0 0) is mandatory, as much as scale (1 1 1)  
rotate (xyz 0 0 z\_value) can have a z rotation value

## Generating smaller 3D model with bounding boxes

Sometimes the need would be just a 3D MCAD model for analysis or simple space constraints, so a nice detailed component models in MCAD system may be not required or desired;

in that case it is possible to configure the exporter to:

- skip 3D models by name
- skip models with a volume less than an assigned value
- skip models with a height less than an assigned value

And then convert the remaining parts, or all but edge connectors, to bounding boxes

The result 3D MCAD model will have the accuracy of the pcb and assemblies only when needed, maintaining the model light as required.

## Configuration file: Blacklist & BoundingBox parameters Preferences Page

The screenshot displays the KiCad StepUp Preferences Page. On the left, a sidebar shows icons for 'Import-Export', 'Part design', and 'KicadStepUp...'. The main area is divided into two panels. The top panel, titled 'Bounding Boxes', contains a 'Black List' section with a text input field and a 'Bounding Box LIST:' section with a text input field. Below these are checkboxes for 'Import/Export', 'Make a', 'Directly', 'STEP exp', '3D Loading', 'Assem', 'Enable', and 'Start Turn'. The bottom panel, titled 'Black List', contains a 'Black List:' section with a text input field and a 'Black List:' section with a text input field. Below these are checkboxes for 'Import/Export', 'Make a', 'Directly', 'STEP exp', '3D Loading', 'Assem', 'Enable', and 'Start Turn'. The bottom of the screenshot shows a 3D model of a blue PCB with various components, including a large black chip and several smaller components. The status bar at the bottom indicates 'hackrf-one-stepup : 1\*'

**Bounding Boxes**

Black List

Bounding Box LIST:

put here a list of 3D models to be converted to Bounding Box, separated by a comma

Examples:

ALL -> all models will be converted to bounding boxes

R\_0603, C\_0603 -> these two models will be converted to BBox

LIST DSUB-15-HD\_FH, DSUB-9\_FH -> these two models will NOT be converted to BBox

Import-Export

Part design

kicadStepUp...

**Black List**

Black List:

put here your model names that you don't want to load (e.g. smallest ones) separated by a comma.

STEP

3D Loading

volume and height are also configurable.

(volume=1 means all models with a volume < 1mm<sup>3</sup> will not be included)

(height=1 means all models with a height < 1mm will not be included)

Examples:

r\_0603,r\_0402,c\_0402,c\_0603

height=1.0

volume=1.0

An empty list means all the models will be parsed.

KiCad StepUp:  
Using  
bounding boxes  
for all but  
connectors and  
skipping  
small parts

# KiCad StepUp tools cheat sheet

<https://github.com/easyw/kicadStepUpMod>

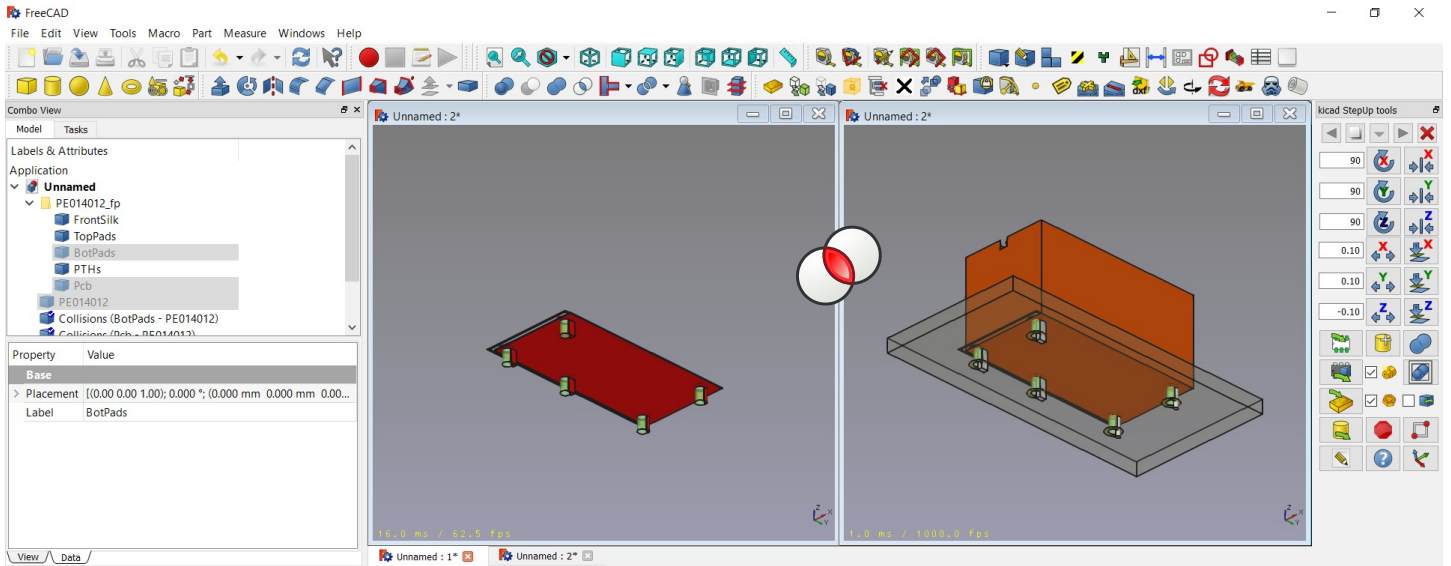

## Check for Interference and mechanical constrains

With kicad-SteUp-tools it is also possible to detect collisions and check mechanical constrains:

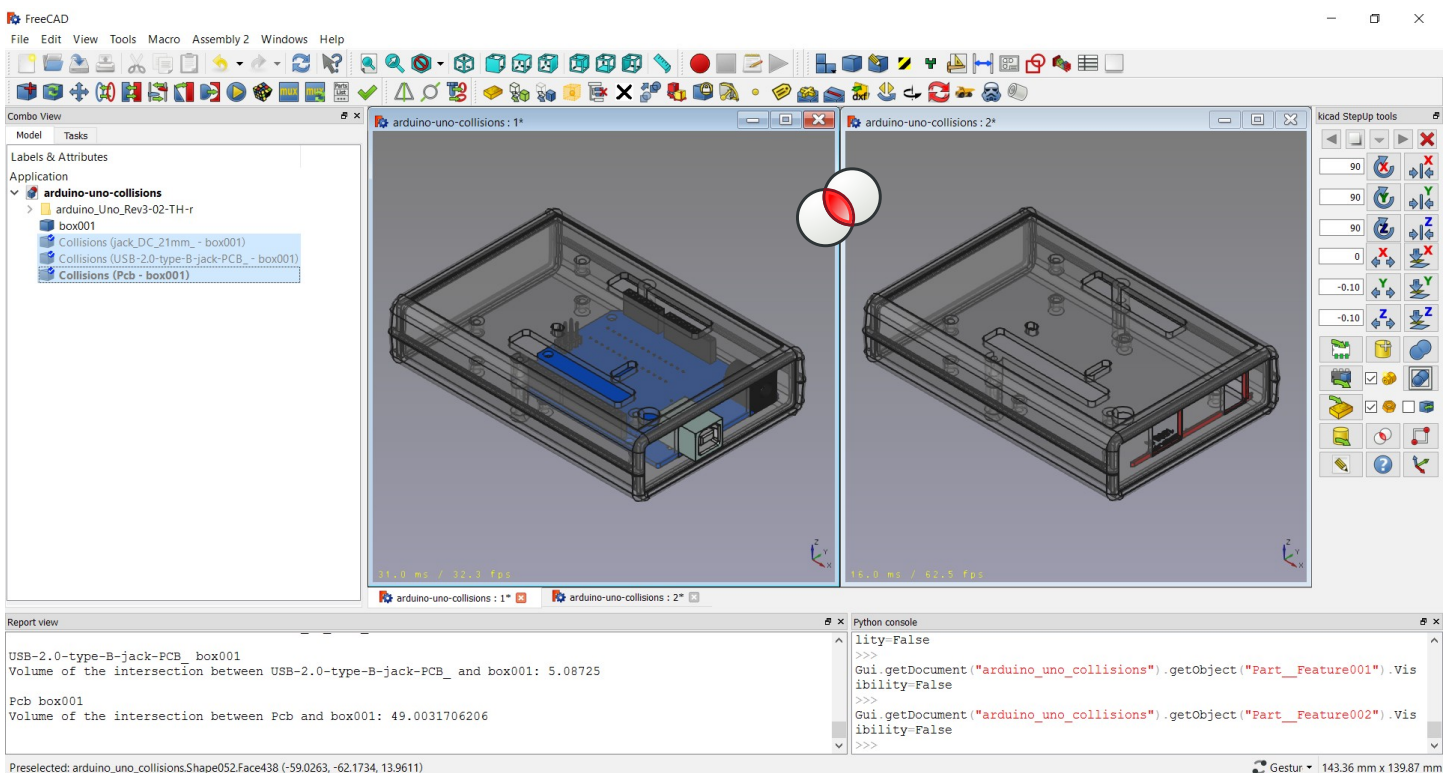

- detect collisions among part pins and drills for footprints
- detect collisions for enclosure clearance (between pcb with parts/connectors and enclosure)

## Interference checking for Footprints

## Interference checking for PCB & Enclosure

# KiCad StepUp tools cheat sheet

<https://github.com/easyw/kicadStepUpMod>

## StepUp: ECAD MCAD Synchronization

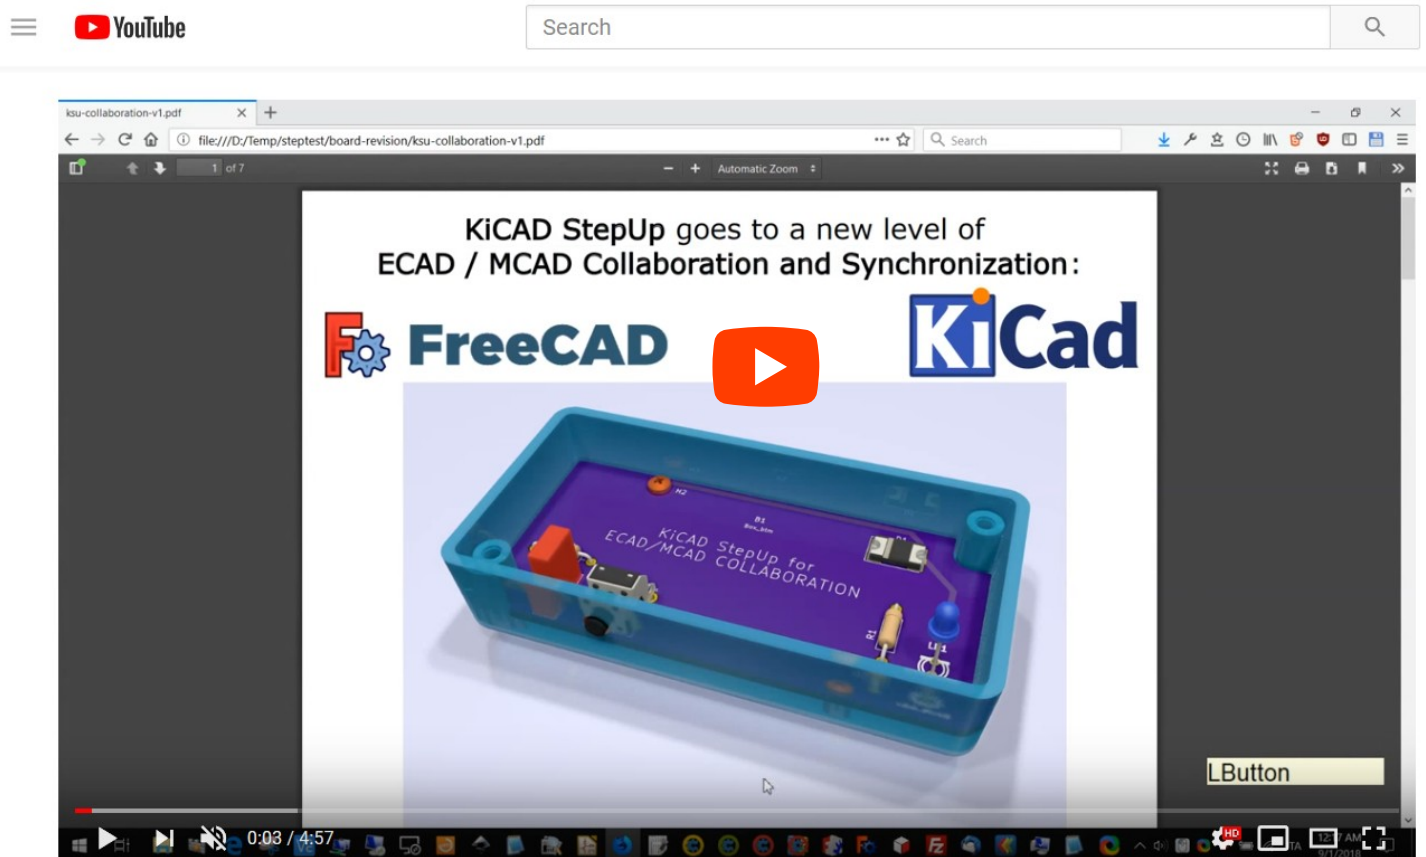

KiCAD StepUp goes to a new level of **ECAD / MCAD Collaboration and Synchronization**:

Push/Pull 3D model placement from/to KiCAD board to/from FreeCAD mechanical design.

It is possible to move 3D packages around on the 3D PCB mechanical sw, via both the X and Y axis.

The syncing process can be done even if the board is (fully) routed (i.e. when a new release requires some mechanical reviews).

**ECAD MCAD integration is now fully implemented.**

kicad StepUp: ECAD MCAD Synchronization

The ECAD MCAD  
collaboration tutorial  
ECAD MCAD Synchronization

### Tips

It is suggested to configure *the preferences Page* to use **grid origin** and **place a grid origin** to **kicad\_pcb** file

PCB Placement    Grid Origin ▼

<https://github.com/easyw/kicadStepUpMod>

## StepUp: The Sketcher

With kicad-SteUp-tools it is also possible to use FreeCAD Sketcher to create or modify a PCB Edge.

- create a new PCB Edge in FreeCAD Sketcher and PUSH it to kicad\_pcb file
- read a PCB Edge from an existing kicad\_pcb file and PULL it to FreeCAD Sketcher
- modify a PCB Edge in FreeCAD Sketcher and PUSH it to KiCad Board

**Line, Circles, Arcs** are supported and also **Bsplines or Ellipses** are supported and converted to KiCad compatible format

## The Sketcher tutorial
