

KiCad StepUp tools cheat sheet

<https://github.com/easyw/kicadStepUpMod>

1) What StepUp tools are for?

KiCad StepUp tools are a [FreeCAD Macro](#) and a [FreeCAD WorkBench](#) to help in **Mechanical Collaboration** between KiCad EDA and a Mechanical CAD.

With StepUp it is possible to:

- load kicad board and parts in FreeCAD and export it to STEP (or IGES) for a full ECAD MCAD collaboration
- load *kicad_mod* footprint in FreeCAD to easy and precisely align the mechanical model to kicad footprint
- convert the STEP 3D model of parts, board, enclosure to VRML with Materials properties for the best use in kicad
- check interference and collisions for enclosure and footprint design
- design a new pcb Edge with FreeCAD Sketcher and PUSH it to an existing kicad_pcb Board
- PULL a pcb Edge from a kicad_pcb Board, edit it in FC Sketcher and PUSH it back to kicad
- PUSH & PULL 3D models positions between FreeCAD and KiCAD
- ECAD / MCAD Collaboration and Synchronization (compressed 'stpZ' format allowed)
- footprint generation even for complex pads and shapes
- generate Blender compatible VRML files

2) Requirements

KiCad StepUp tools need with the following requirements:

- **KiCad Stable Release >= 4.0** or kicad **Nightly Development Builds**
- **FreeCAD** stable release >= **0.18** (FC daily is supported too)
- a library of STEP 3D models now available as default from [KiCad/packages3D](#)

3) How to install StepUp tools

KiCad StepUp tools can be installed as a **FreeCAD Macro** but it is strongly suggested to install StepUp as a **FreeCAD WorkBench**.

Since KiCad StepUp tools have been added to [FC WorkBenches](#), so they can be installed through the FreeCAD [addons installer](#) or starting from FC version 0.17, through the **addons manager** in the FC Tools Menu. Then StepUp buttons will be available to be customized in FC Toolbars.

If KiCad StepUp tools are installed as a FC WorkBench, then **it will be possible to Open directly from the FC File Menu a *kicad_pcb* board file or a *kicad_mod* footprint file** and many useful features will be also available.

4) Configure StepUp tools

To use StepUp tools for converting a *kicad_pcb* Board to a mechanical STEP model you just need to **configure** your 3D prefix path(s) like your **KISYS3DMOD** value into the FreeCAD StepUp preferences page, located in the preferences system of FreeCAD (Edit menu -> Preferences).

Just click the green icon:

5) Tips

Tips to use StepUp tools at its best

- never use a scale different from 1:1:1 in your 3D models
 - configure your [prefix3D] in the FreeCAD StepUp preference page to your KISYS3DMOD path
 - use STEP or STPZ or IGES or VRML or WRZ or mixed type of models in your board
 - use bounding boxes to reduce your STEP board file size if required
 - each 3D model is suggested to be a single object (union of parts or compound in FC)
- note:** compound may be slower than union, because it needs to re-create a compound after loading the model

6) Useful Video Tutorials

Here some links of StepUp tutorial:

- StepUp: [Align Parts to Kicad footprint](#)
- StepUp: [converting a KiCad board and Parts to STEP](#)
- StepUp: [PUSH & PULL a PCB Edge using FC Sketcher](#)
- StepUp: [PUSH&PULL 3D models between KiCAD & FreeCAD \(ECAD MCAD Synchronization\)](#)

There is also a video tutorial made by a user:

- StepUp: [Installing, Import 3D model, Exporting the Board](#)

Note: in the video the user is copying all demo files, when in fact it is better to install StepUp as a FreeCAD WorkBench.

7) Need Help?

KiCad info forum is a great resource:

<https://forum.kicad.info/search?q=step>

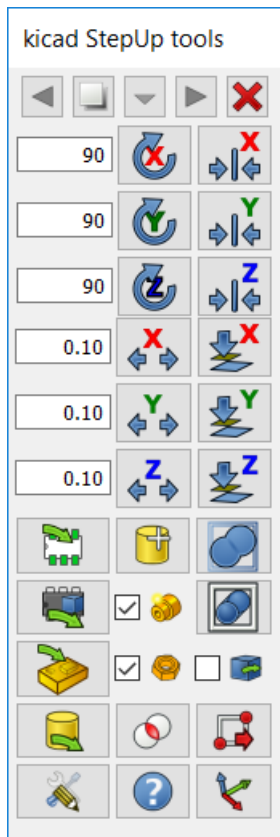

KiCad StepUp tools cheat sheet

The Main Gui

A brief recap on KiCad StepUp tools buttons.

Note: each button has a Tooltip

Load 'kicad_pcb' Board

Load a 'kicad_pcb' file into FreeCAD

Import 3D model to be Aligned

Import a 3D STEP model into FreeCAD

Load 'kicad_mod' Footprint

Load a 'kicad_mod' footprint into FreeCAD

Export 3D model Aligned

Export a 3D STEP & VRML model back to KiCad

Export selected to STEP

Export selected objects or Board and Parts to hierarchical STEP file

Push & Pull PCB Edge

Read and Write pcb Edge from KiCad into FC Sketcher

Add Reference Axis

Add reference Axis to the FreeCAD design

Check Interferences and Collisions

Check Interference and Collisions in Board Design

Useful Designing external workbenches

Two external workbenches:

- [Manipulator workbench](#) useful to align and move assemblies and STEP models
Aligner Mover and Caliper are companions in 3D modelling

[Defeaturing workbench](#) useful for editing STEP models, removing some features from the model; defeaturing and repairing tools.

FreeCAD 0.18

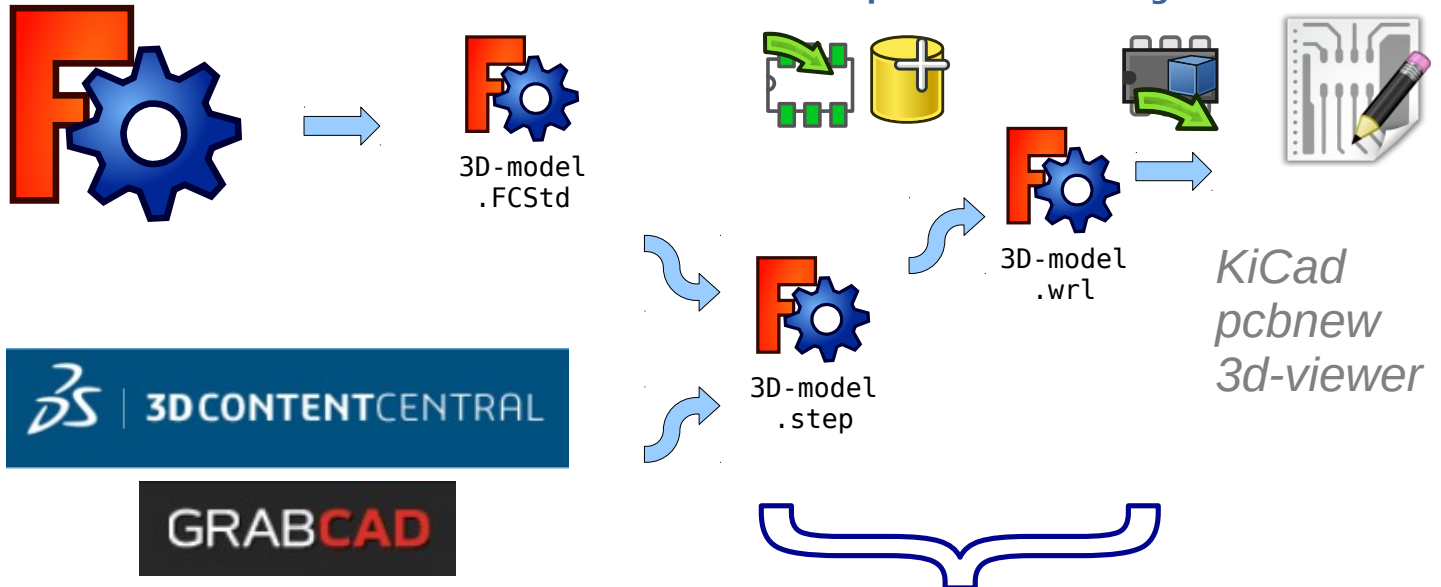

KiCad StepUp tools cheat sheet

<https://github.com/easyw/kicadStepUpMod>

StepUp WorkFlow for 3D models

How to create a 3D model library for KiCad with StepUp tools

STEP compressed ['.stpZ']
VRML compressed ['.wrz']
formats are allowed

Use FreeCAD or any MCAD sw as 3D designer for a 3D model, or just download a 3D STEP model from on-line libraries

Place the exported models to the KISYS3DMOD folder

Use Manipulator WB

to align the STEP model to footprint
[Manipulator workbench](#)

Note:

when aligning a 3D model to a kicad footprint, StepUp takes care of:

- 2D footprint rotation of kicad for the footprint alignment
- vrml model z rotation

It is mandatory that the footprint has:

- x and y of the 3D model rotation set to 0
- x, y and z of the 3D model translation set to 0

The user has to check/modify, if needed, the part of 3D vrml/step model in kicad as following

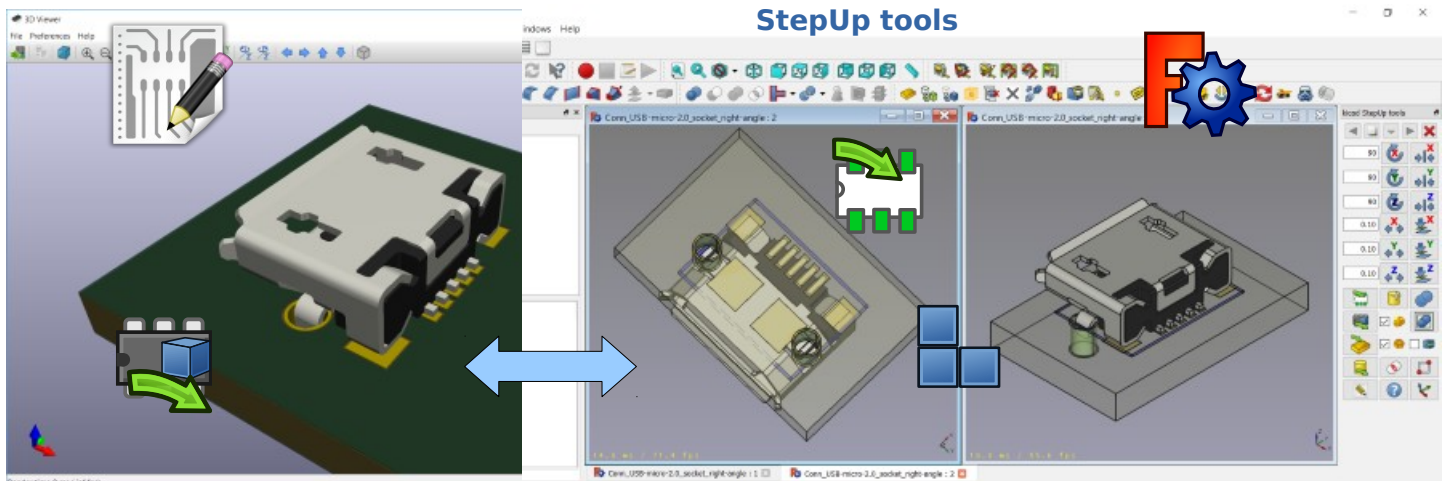

```
(model path/name.wr1
(at (xyz 0 0 0))
(scale (xyz 1 1 1))
(rotate (xyz 0 0 0))
```

at (xyz 0 0 0) is mandatory, as much as scale (1 1 1)
rotate (xyz 0 0 z_value) can have a z rotation value

Generating smaller 3D model with bounding boxes

Sometimes the need would be just a 3D MCAD model for analysis or simple space constraints, so a nice detailed component models in MCAD system may be not required or desired;

in that case it is possible to configure the exporter to:

- skip 3D models by name
- skip models with a volume less than an assigned value
- skip models with a height less than an assigned value

And then convert the remaining parts, or all but edge connectors, to bounding boxes

The result 3D MCAD model will have the accuracy of the pcb and assemblies only when needed, maintaining the model light as required.

Configuration file: Blacklist & BoundingBox parameters Preferences Page

The screenshot displays the KiCad StepUp Preferences dialog box. The 'Bounding Boxes' tab is selected, showing options for 'Black List', 'Import/Export', 'STEP export', '3D Loading', and 'Start Turn'. The 'Black List' section is expanded, showing a list of model names to be converted to bounding boxes. The 'Black List' section is also expanded, showing a list of model names to be excluded from the bounding box conversion.

Bounding Boxes

Black List

Bounding Box LIST:

put here a list of 3D models to be converted to Bounding Box, separated by a comma

Examples:

ALL -> all models will be converted to bounding boxes

R_0603, C_0603 -> these two models will be converted to BBox

LIST DSUB-15-HD_FH, DSUB-9_FH -> these two models will NOT be converted to BBox

Black List

Black List:

put here your model names that you don't want to load (e.g. smallest ones) separated by a comma.

STEP volume and height are also configurable.

3D Loading (volume=1 means all models with a volume < 1mm³ will not be included)

Examples:

r_0603, r_0402, c_0402, c_0603

height=1.0

volume=1.0

An empty list means all the models will be parsed.

KiCad StepUp: Using bounding boxes for all but connectors and skipping small parts

The bottom part of the image shows a 3D model of a blue PCB assembly with various components, including connectors and small parts, illustrating the result of the bounding box conversion process.

KiCad StepUp tools cheat sheet

<https://github.com/easyw/kicadStepUpMod>

Check for Interference and mechanical constrains

With kicad-SteUp-tools it is also possible to detect collisions and check mechanical constrains:

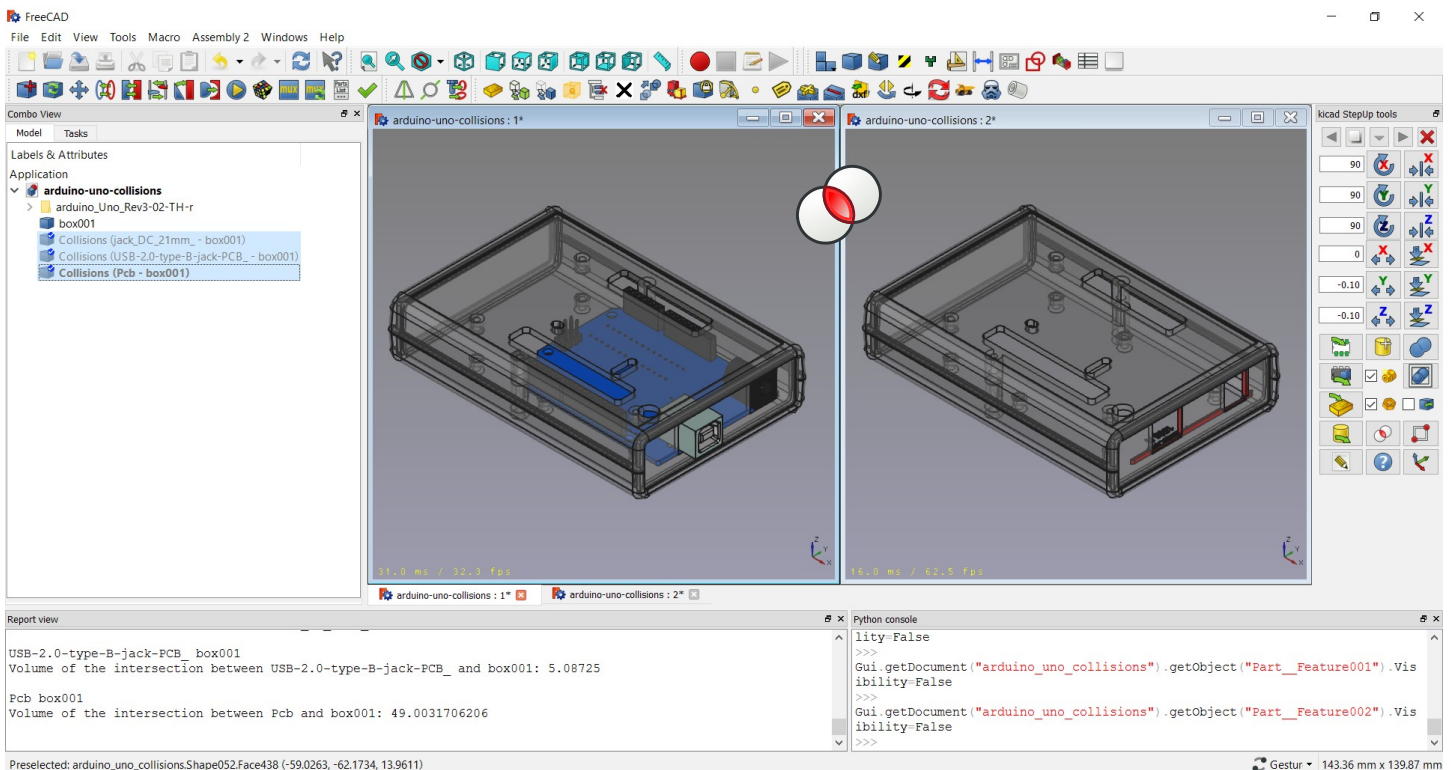

- detect collisions among part pins and drills for footprints
- detect collisions for enclosure clearance (between pcb with parts/connectors and enclosure)

Interference checking for Footprints

Interference checking for PCB & Enclosure

KiCad StepUp tools cheat sheet

<https://github.com/easyw/kicadStepUpMod>

StepUp: ECAD MCAD Synchronization

KiCAD StepUp goes to a new level of **ECAD / MCAD Collaboration and Synchronization**: Push/Pull 3D model placement from/to KiCAD board to/from FreeCAD mechanical design. It is possible to move 3D packages around on the 3D PCB mechanical sw, via both the X and Y axis. The syncing process can be done even if the board is (fully) routed (i.e. when a new release requires some mechanical reviews).

ECAD MCAD integration is now fully implemented.

kicad StepUp: ECAD MCAD Synchronization

KiCad StepUp tools cheat sheet

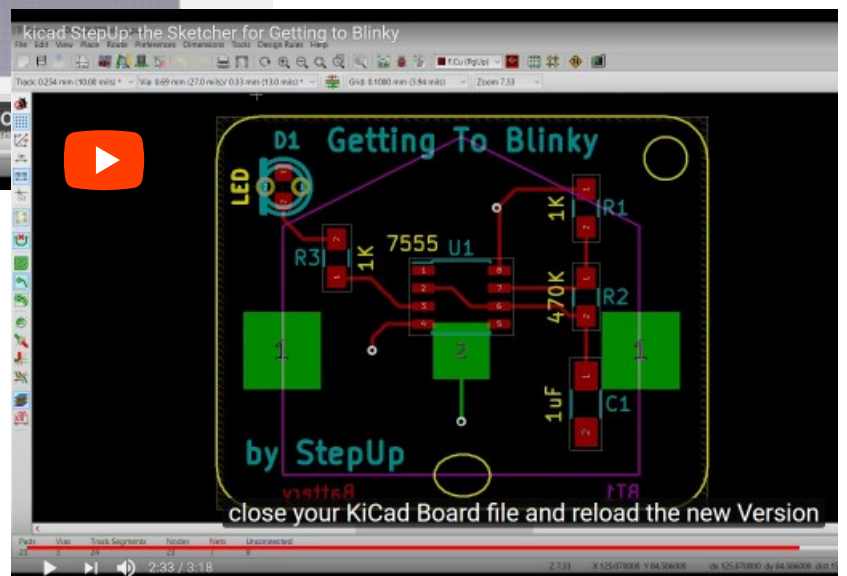

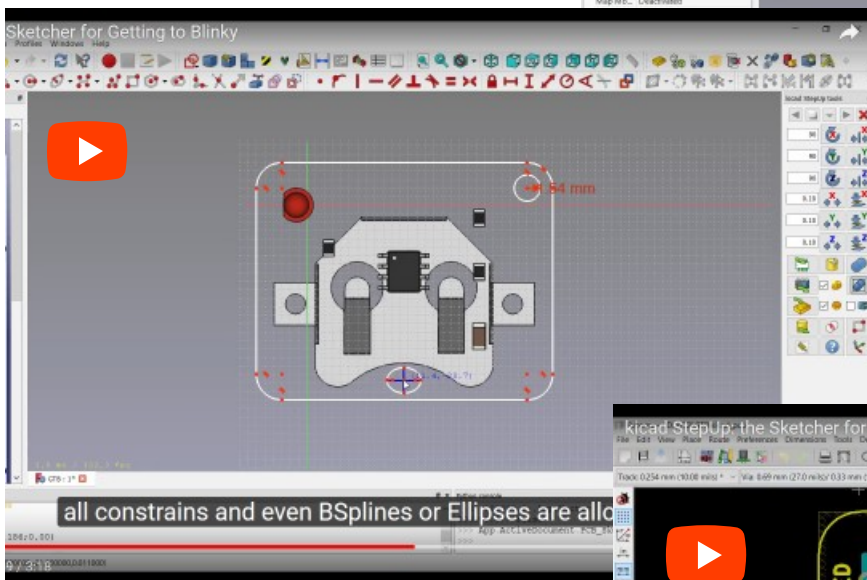

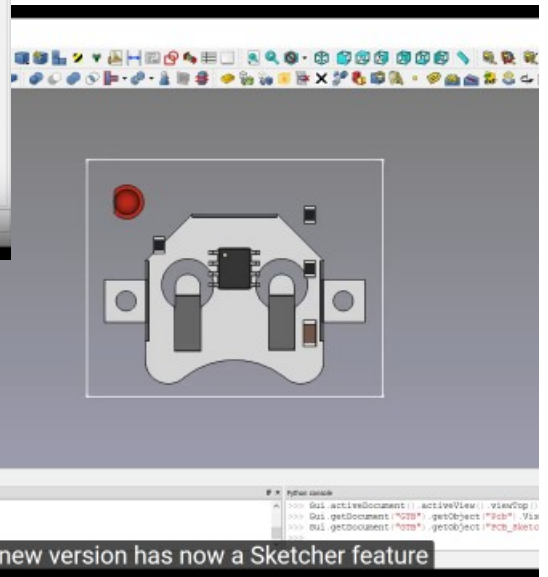

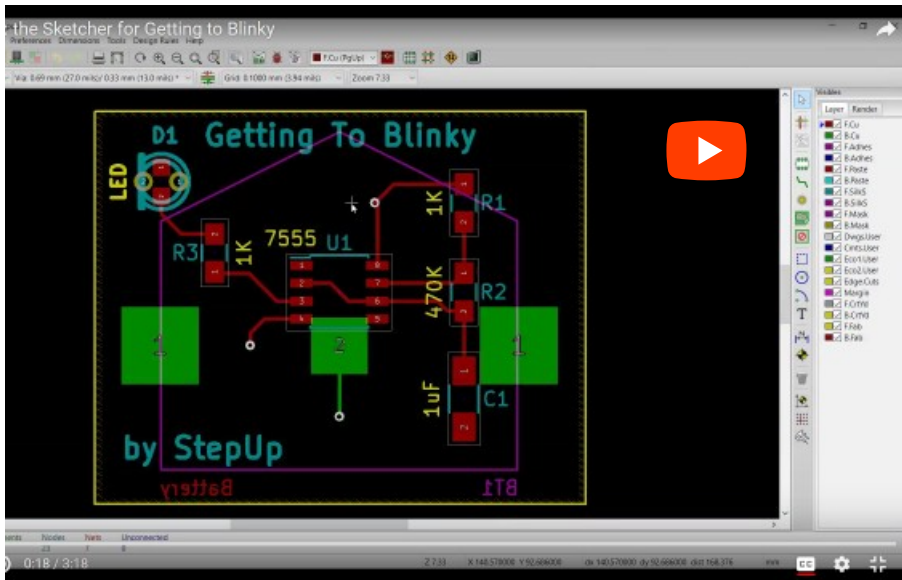

<https://github.com/easyw/kicadStepUpMod>

StepUp: The Sketcher

With kicad-SteUp-tools it is also possible to use FreeCAD Sketcher to create or modify a PCB Edge.

- create a new PCB Edge in FreeCAD Sketcher and PUSH it to kicad_pcb file
- read a PCB Edge from an existing kicad_pcb file and PULL it to FreeCAD Sketcher
- modify a PCB Edge in FreeCAD Sketcher and PUSH it to KiCad Board

Line, Circles, Arcs are supported and also **Bsplines or Ellipses** are supported and converted to KiCad compatible format

StepUp: The Sketcher for footprint generation

With kicad-SteUp-tools it is also possible to use FreeCAD Sketcher to create or modify a Kicad footprint.

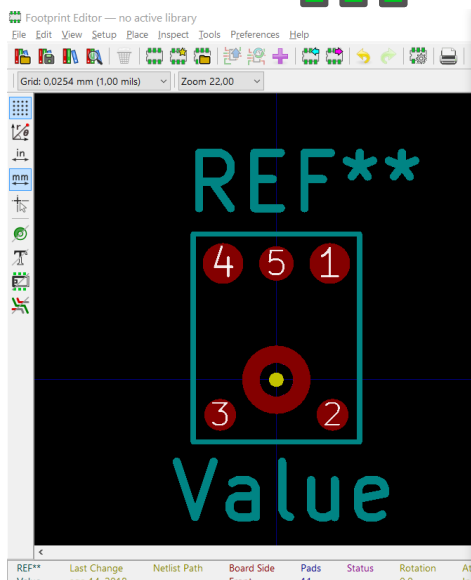

- create a new footprint in FreeCAD Sketcher and PUSH it to kicad_mod file
- modify an existing kicad footprint in FreeCAD Sketcher and PUSH it back to 'kicad_mod'

Line, Circles, Arcs are supported and also **Bsplines or Ellipses** are supported and converted to KiCad compatible format

Preferences Page for configuring main parameters

All buttons have Tooltips

The image shows the 'Preferences' dialog box in KiCad, specifically the 'General' tab. The dialog has a sidebar on the left with icons for General, Display, Import-Export, Part design, and kicadStepUp... The main area is divided into sections: 3D Prefix working folder, PCB settings, Import/Export settings, and Mechanical Check. The 'General' tab is selected, and the 'kSU 'Help Tips'' sub-tab is active. The '3D Prefix working folder' section contains two text fields: 'main 3D folder location' with the value 'C:/Cad/Progets/a_mod/a_3Dpkg' and 'secondary 3D folder loc' with the value 'C:/kicad-v5-3dmodels'. The 'PCB settings' section includes a 'PCB color' dropdown set to 'DarkGreen', a 'PCB Placement' dropdown set to 'Grid Origin', a 'PCB Sketch mode (constraints)' dropdown set to 'Coincident', a 'minimum edge tolerance' text field with the value '0.02', a checked checkbox for 'Virtual 3D Models loading', a 'minimum Drill size applied to PCB' text field with the value '0.0', a 'Bounding Boxes' text field, and a 'Black List' text field. The 'Import/Export settings' section includes two unchecked checkboxes: 'Make a Union of 3D models' and 'Directly Export STEP after Loading', a 'STEP export mode' dropdown set to 'Hierarchy', and a '3D Loading mode' dropdown set to 'Standard'. The 'Mechanical Check' section includes a checked checkbox for 'Generate Sketches for differences on PCB Edge'. At the bottom of the dialog are buttons for 'Reset', 'OK', 'Cancel', 'Apply', and 'Help'.
